About the Seminar

Skin cancer is the most common malignant disease found in a million new cases worldwide each year. The seminar will explore the idea of latest available information concerning diagnostics, prevention and treatment of skin cancer. We focus especially on newest technological approaches with the goal being to diminish unwanted side effects and their severity by diagnosing using imaging techniques.

This seminar is to create an awareness on the various approaches for a cheaper treatment and generally a more efficient chemotherapy and therapeutic approaches necessary for improving either the quality of life or survival of affected patients. The increasing incidence of skin cancers prompted the development of noninvasive medical devices to improve skin cancer diagnosis in daily dermatology practice. As a result of the development of these noninvasive techniques, diagnosis is now established earlier and with better accuracy. These advances are of great benefit to high-risk patients, who previously would have undergone several excisions.

In this review, this seminar focuses on the classic technique of dermoscopy and the more recent digital version, as well as on advanced noninvasive imaging techniques, such as reflectance confocal microscopy and optical coherence tomography.

Topics:

- Awareness on Types of Skin Cancer and its Effects
- Imaging Techniques for Early Detection and Diagnosis of Skin Cancer
- Advanced Skin cancer Medicine and surgery techniques
- Skin Cancer Prevention and Inflammatory skin diseases

Participants:

- Academicians
- Research Scholars
- Students
